- When we say (project) that mean the project Uruk in general including all sub-projects.
- When we say (sub-project) that mean all the projects under the Uruk project.
- That's documentation considered as social contract between project and project members or contributors.
- The changes which work to change the documents from meaning or content are approved.

Define the project:

The Uruk project is a highly motivated community of people sharing a strong interest in free culture and free society to help each other and share the common purpose of supporting and building free projects to promote and strengthen free (as in freedom!) software and culture.

Paragraph 1:

Project Name:

Project name (Uruk) this name chose because it's indicate the historical Iraq city Al-Warka (Uruk) which assigns to it the first letter in the world.

Project Logo:

The logo symbolizes to the Sumerian palm surrounded with two half circle represent the Tigris and Euphrates rivers, so as all know, the water and palm represent the good and bestowal to others with strength , to assign to the basic project goals.

Paragraph 2:

Project Goals:

- Establish and maintain free projects to support the free software community.
- Develop a free GNU/Linux distribution to meet the users needs.
- Support the less common languages for the free software community.
- Spread the free software philosophy in places where such philosophy is weak.
- Focus on the accessibility to help all users, and in particular those with disabilities, operate their computers in the easiest way possible.

Paragraph 3:

Structuring the project:

- Project consists of group from sub-projects which maybe torsion in turn to another sub-projects not specified by a certain number, which represent in their sum a main project and subject to the same project goals.
- Project haven't general administration or official speaker, but project system depend on voting and accepting of majority, and if that's very important to choose a coordinator or general speaker it will be chose to this purpose only and end his validity when this purpose end or voting to change him.
- Every things related in project will discuss in mail list or in communication tools that choose from project or sub-project team members, or in meetings if it happened, this meetings will report to mail lists to watch on it who not in this meetings.
- New project will added to sub-projects list after voting from main members.
- In case suggest idea create new project from any member, the idea owner became the project leader
- All members should follow the paragraph 5, and all contributions should follow the paragraph 4.

Paragraph 4:

Contributing in project:

1. You can contribute in what helping the project such as for example : writing documentation like books, references and information on internet, writing software and system applications, make research, designing in general, manage systems, translating documentation, make conferences or meetings to publish culture of open software.
2. All contributions which required software, must generated by open software only.
3. All contributions which required license must be under free licenses only.
4. Contribute in project open to anyone without select age, sex, religion or orientation as long as this contribution will develop the project and sub-projects.

Paragraph 5:
