The previous article in this series was Part 4 - Secure coding.

After writing up my secure coding guideline and finding it was over 11 pages, my editor informed me that it was inappropriate to publish as a single blog post. With compromise in mind, and in the hopes that people continue reading my blog, I agreed to break up the guideline into several shorter posts. The first few posts will be in-depth details of several of the items for the guideline, then a final post which will be a short, concise guideline, with links to each of the previous posts for further explanation.
