

# ZOOM IS FOR ZUCKERS

Why should any company know about our children? Let alone track their every move?

## COVID-19

made us move learning into digital world. Using Internet services like Zoom, we are able to attend classes that otherwise would be unattainable.

**But is using a convenient service is enough excuse to take away privacy and freedom from our children?**

**NO!**

**But what can we do?**

We can use Free Software instead.

[gnu.org](http://gnu.org) [fsf.org](http://fsf.org)

Free Software means:

0. You can use it at any time for any purpose.
1. You can study and modify the source code.
2. You can share it.
3. You can share it with changes.

**It means you control it.**

- **Easy to use**
- **Easy to set up**
- **No logins**

**BigBlueButton™**

- **Feature Rich**
- **Students love it**
- **Professional**

## ZOOM'S

Problems:

- Zoom lied to users for years its software's encryption capability and security. It also installed malware to override security features of some browsers.
- Zoom sends users' personal data straight to Facebook.
- Zoom is developing geographically-fenced account blockage so as to satisfy repressive governments such as China.
- Zoom requires to run a non-free client.
